GOOGLE LAUNCHES TENSORFLOW 3D USING LIDAR & DEPTH SENSORS FOR ADVANCED AR EXPERIENCES

Google added TensorFlow 3D (TF 3D), a library of 3D depth learning models, including 3D semantic segmentation, 3D object detection, and 3D instance segmentation, to the TensorFlow repository for use in autonomous cars and robots, as well as for mobile AR experiences for devices with 3D depth understanding.

TF 3D provides a set of popular operations, loss functions, data processing tools, models, and metrics that enables the broader research community to develop, train and deploy state-of-the-art 3D scene understanding models.
