Apple Released RealityKit2 with Object Capture

Turn photos from your iPhone or iPad into high-quality 3D models that are optimized for AR in minutes using the new Object Capture API on macOS. Object Capture uses photogrammetry to turn a series of pictures taken on your iPhone or iPad into 3D models that can be viewed instantly in AR Quick Look, or integrated into your Xcode project.

AI Tool for Music Classification Developed by Queppelin

Queppelin has made an AI based tool for Music Classification. We listen to a lot of songs daily, but we are always confused about what to listen to next. The ML audio classification tool analyzes songs and groups them according to 10 genres and various other attributes. Queppelin has used cutting-edge ML technology and done various experiments to get to a model that analyses genre at 77% accuracy levels and recommends the right music according to the user's listening habit.

Best WebAR Examples in 2021

One of the most impressive new advancements in Augmented Reality (AR) is the growth of WebAR. WebAR is taking the internet by storm. Learn more about the Best WebAR Examples in 2021 from our Blog.
